When all the elements of a company continuously work together in harmony, sustained growth is achieved. CB&I's internal chemistry provides the optimal environment for innovation and performance excellence now and into the future.
Cover & Inside Cover: Kearl oil sands project: Alberta, Canada
Our growth has been purposeful and strategic. We have developed the talent, systems and capabilities to design and build world-scale projects for our clients in the energy and natural resource industries. When CB&I is on the job, our clients know their projects will be completed safely, on time and on budget.

Superior project execution and our efforts to strategically position CB&I for the future have produced solid financial results that place us on a path toward achieving sustained growth. Building on these achievements, we see strong growth prospects in the markets we serve. We are confident CB&I will continue to capitalize on opportunities to grow and deliver value to our shareholders.

We are proud of our performance in 2011. Our outstanding safety record, strong new awards, solid margin performance and substantial cash generation are all evidence of our success this past year and an indication of our continued growth in 2012.

Philip K. Asherman
President and
Chief Executive Officer

L. Richard Flury
Non-Executive Chairman
Former Chief Executive Officer
Gas, Power and Renewables, BP plc
2011 was an exceptional year for CB&I – strategically, operationally and financially. We achieved numerous milestones which strengthened our standing as a global leader in providing premier process technology, energy infrastructure and storage solutions. With the goal of continuing this success, we challenged ourselves to focus on sustained growth.

Over the past several years, we have proven we can deliver on our promises by completing massive energy infrastructure projects on time and to our clients’ expectations, taking major projects from concept to completion efficiently and with exceptional safety performance. 2011 was no different, and I am confident in our ability to meet the increasingly complex challenges the energy industry faces.

We continue to pursue awards in the end markets we serve through the diverse capabilities of our three business sectors and our extensive global experience and presence. We prove time and again that not only can we win work but we can successfully complete projects for the benefit of all our stakeholders.

Financial Results
For more than a decade, CB&I’s earnings have grown by a compounded annual rate of more than 25%. We continue to win new work and we finished the year strong with $6.8 billion in new awards and a year-end backlog of $9.0 billion.

Our liquidity remains solid and our cash balance grew to $671.8 million at the end of the year. We delivered value to shareholders through dividends of nearly $20 million and share buy backs of $136 million. Our priority for our cash will always be to grow the company, and our balance sheet is very healthy, giving us the opportunity to be flexible enough to drive growth through a variety of strategic investments. An excellent example of this was the acquisition of CDTECH, which enabled us to increase our prospective customer base, extend our R&D capabilities and strengthen our recurring earnings streams.

Each of our three sectors had a strong year, as evidenced by our gross profit of $570.2 million, or 12.5% of revenue, and our net income, which saw double-digit growth year over year. Revenue of $4.6 billion was as expected, representing a 25% increase over 2010.

Safety
Safety is our highest priority. The health and wellness of our employees, subcontractors and anyone else who steps onto one of our sites is paramount. Our safety culture is founded in our goal of “Nobody Gets Hurt” at CB&I. In 2011, more than 58 million work-hours were expended around the globe including subcontractor hours. In that total, we recorded a 0.02 Lost Time Incident Rate (LTIR), which means we had just one Lost Time Incident for every 12,200,000 hours worked. This is the same rate we’ve achieved for the previous two years, reflecting our commitment to the belief that zero incidents can be accomplished.

To Our Shareholders

Image: REFINCAR refinery project: Cartagena, Colombia
Confidence in Growth

In the past year, we have positioned the company so we will continue to grow, even when markets slow, or technology changes, or the competitive landscape tightens, or our clients’ desires shift. We have the ability to perform work anywhere in the world from concept to completion and our nearly 125 years of experience spans the globe.

To continue our strategic path forward, we are focusing on a diverse range of global end markets including: LNG, Gas Processing, Refining, Petrochemicals, Oil Sands, Offshore and Nuclear Power.

Today, we are performing a significant amount of work in the LNG market including FEED studies for liquefaction projects, like the recently awarded contract for the Freeport liquefaction project in the U.S., and others in Australia and Russia; LNG storage projects in the Asia Pacific region; and the $2.3 billion mechanical, electrical and instrumentation (MEI) work on the Gorgon project in Western Australia.

But it's not just the LNG market we've excelled in this year. We continue to provide exceptional work to all our clients in the energy industry – from licensing proprietary technologies to engineering, procurement and fabrication to tank design and a variety of construction services. In Canada, the Kearl oil sands project continues to make steady progress; the nuclear power plants are moving forward in the U.S.; gas processing efforts in Papua New Guinea and the U.S. are ramping up; and work on offshore infrastructure is occurring in the North Sea.

The culmination of all our capabilities is best exemplified by our work on the REIFICAR project in Cartagena, Colombia, where all three business sectors are working together. We are currently providing technology, the EPC of the entire refinery and all of the storage for the project.

Looking forward, we see significant growth opportunities in the markets we serve. For example, the natural gas market in the U.S. is experiencing considerable momentum due to the abundance of shale gas, which should lead to increased opportunities in petrochemicals, power and LNG.

Execution Excellence

Time after time, we prove that we have the experience, capabilities and consistent systems and procedures to execute projects – small and large – all around the world. Our business sectors work together and separately to deliver the solutions our clients need. We believe in our markets and are confident we will meet those markets' needs as countries continue to invest in their growing economies, resources and technologies.

The year is a snapshot of the growth we have achieved and our potential for the future. We are confident we are positioned to win with our talent, relentless focus on safety and our uncompromising standard of ethical business practices. I look forward to next year and believe in our ability to continue to win major new work, sustain our profitability and continue to grow our company.

Thank you for your continued support.

Philip K. Asherman
President and Chief Executive Officer
Safety is a Core Value and our highest priority. It is our obligation to protect our employees and everyone who works on our sites and in our offices. CB&I is among the best in the industry at providing a safe working environment where everyone can work productively and go home uninjured every day.

Our safety culture is founded in our goal of "Nobody Gets Hurt" at CB&I. We take a proactive approach to safety through rigorous training that instills procedures and processes into everyday life in the field, in the lab and in our offices. To achieve the impressive safety performance we have year after year, we train our employees to identify leading indicators of at-risk conditions for immediate corrective action to prevent injury to our employees. Central to those efforts is our in-house "I CARE" process that encourages employees to conduct peer-to-peer observations and provide feedback to each other to modify any behaviors that could endanger team members. These observations have led to reductions in incidents as employees take ownership of the safety process and look out for one another.

As a result of our culture, we continue to have an outstanding safety record. In 2011, we recorded a **0.02 Lost Time Incident Rate (LTIR)**, compared with the 2010 Construction Industry Institute (CII) average of 0.07. This measurement was recorded over a total of more than 58 million work-hours expended globally. **Several projects achieved no Lost Time Incidents in 2011**, including the following:

- **REFICAR refinery project** in Colombia with more than 9.3 million work-hours
- **Fujian LNG tanks and terminal project** in China with more than 7.9 million work-hours
- **Petrotrin FCCU project** in Trinidad with more than 5.8 million work-hours
- **Kearl oil sands project** in Canada with more than 3.4 million hours

Our Recordable Incident Rate (RIR) for 2011 was **0.17**, a commendable achievement compared with the 2010 CII average of 0.64. Our projects have garnered numerous safety awards from clients, industry associations and safety organizations. Our safety performance reflects our commitment to the belief that zero incidents can be achieved.
Our strategy has always been to focus on a select group of growth industries. Over the next decade, we see exceptional opportunities in the following key end markets, which underscore our confidence in our ability to achieve sustained growth.

**LNG**
The world recognizes that natural gas is the cleanest fossil fuel; and in liquid form, LNG offers a supply option to any country with access to a seaport. According to Global Data, liquefaction capacity grew at 8% over the last five years and is expected to grow at more than 10% during the next five years. CB&I offers a full range of services to the LNG market worldwide, from tank supply to full EPC for liquefaction, regasification and peak shaving facilities.

**Gas Processing**
Increased natural gas demand necessitates additional gas treating and processing facilities to remove impurities or valuable liquids prior to natural gas being ready for transport to consumers. Facilities can range from small shop fabricated modules to massive field erected plants. CB&I offers a complete range of technologies and services to this sector, allowing owners to maximize the value of their production.

**Refining**
Refiners worldwide face a number of challenges, including increasing global demand, heavier and more sour feedstocks, cleaner product specifications, and stricter emission limits on their facilities, in addition to stiff competition. CB&I is an industry leader in providing innovative solutions to help refiners address changing market conditions and regulations. We license premier technologies; we engineer, procure, fabricate and construct a wide array of refinery process units; and we offer unparalleled storage tank construction expertise.

**Petrochemicals**
Petrochemical usage is forecasted to grow more than 5% per year through 2020, according to Global Data. Owners will seek the most cost effective supply of feedstocks while requiring efficient plant designs capable of accepting a variety of those raw materials. CB&I is a leading player in licensing proprietary process technologies to the global petrochemical industry. We have a unique ability to offer our clients full-scope facilities using both in-house technologies and proven EPC services from start to finish.

**Oil Sands**
Given sustained high oil prices, Canada’s oil sands industry is busy. The Canadian Association of Petroleum Producers reported that oil sands production is slated to grow more than 6% per year through 2025. CB&I has more than 45 years of experience in this industry, having designed and built numerous primary separation vessels, upgrading facilities and storage tanks – elements that are critical to the process of preparing this resource to respond to global demand.

**Offshore**
Finding and producing new sources of oil and gas is becoming increasingly difficult. As onshore opportunities become more challenging, producers are drawn offshore into deeper water and harsher environments. Currently, about 30% of the world’s oil and gas is produced from offshore sources, a statistic that is expected to increase over time. For decades, CB&I has designed and managed some of the world’s more complex offshore projects and has engineered more than 30 floating production, storage and offloading projects globally.

**Nuclear Power**
Nuclear power has the ability to provide large quantities of stable, low cost energy with virtually no carbon emissions. Although the industry is cautious because of the earthquake and tsunami in Japan, the market continues to develop. In the U.S. alone, some 15 new plants, representing 24 reactors, are under consideration. CB&I’s history of providing containment structures to the nuclear industry, dating back to the earliest commercial reactors, makes us uniquely qualified to provide full EPC services for today’s simpler, safer and more reliable plant designs.

*Images: GASCO: Ruwais, Abu Dhabi, UAE; REFINCAR refinery project: Cartagena, Colombia*
From liquefaction FEED studies in Australia to shale gas treatment technologies in the U.S. and from topsides in the North Sea to bitumen extraction in Canada, our new awards demonstrate our success in the markets we serve and enhance our position for future growth. Our clients choose to work with CB&I because of our unique business model. Our experience, global footprint, range of capabilities and flexibility set us apart.

Experience
CB&I has nearly 125 years of experience, and all 18,000 of our employees build upon that experience every day. Some of our employees have worked with the company for 30, 40 and even 50 years and we have long work histories in most of the countries where we have projects today. Our stellar reputation stems from this talent pool and from our commitment to excellence and to our clients. We value building relationships with our clients that lead to repeat business throughout the lifecycle of projects and their future endeavors.

Global Footprint
Our diverse global footprint allows us to capitalize on opportunities anywhere in the world. Wherever work is, we can perform it – we have worked on all seven continents. From different offices around the world, we can execute engineering work simultaneously with the help of our “Multiple Office Project Execution” (MOPEX) system, a process that enables all team members around the world to work together seamlessly. We are just as aware of our local footprint as we are of our global footprint, and we value our relationships with the local communities in which our offices and projects are located.

Broad Scope
CB&I’s business model is unique and highly valued by clients. Our three business sectors – Lummus Technology, Project Engineering and Construction and Steel Plate Structures – offer a range of capabilities to our clients in all of our end markets. Our services include conceptual design and technology licensing; engineering, procurement, fabrication and construction; as well as storage, final commissioning and beyond.

Flexible Approach
We offer flexibility to our clients, providing both single-source solutions and an entire range of technology and EPC services. Our business model lends itself well to that flexible approach as does our financial capacity, which positions us for sustained growth. We also provide a balanced and flexible contractual approach to our clients, including cost reimbursable, lump sum or a hybrid of the two.
CB&I is composed of three business sectors that provide all the pieces to design, engineer and construct some of the world’s largest energy infrastructure projects. This structure allows us to execute any phase of a project or the whole project from concept to completion. With the capability to perform every phase of a project with our own workforce, our integrated business model translates into shorter project schedules, lower costs, improved quality control and reduced risk for the client. Our business sectors are:

**Lummus Technology**
CB&I provides licensed proprietary technologies, specialty equipment and catalysts that are crucial in converting crude oil into gasoline, diesel and other end products; processing natural gas; and manufacturing petrochemicals. We are renowned for the scope of our technology assets and are a global leader in the industry.

**Project Engineering and Construction**
CB&I provides engineering, procurement, fabrication and construction of upstream and downstream process facilities for the hydrocarbon industry. We are one of the few contractors in the world that can self-perform the entire scope of a project, from start to finish, with our own in-house resources.

**Steel Plate Structures**
As the world’s largest and most experienced tank construction company, CB&I designs, fabricates and constructs storage tanks and containment vessels and their associated systems for the oil and gas, petrochemicals, water and wastewater, mining and nuclear industries. The company’s first steel plate storage vessel was built in 1893. Today, we have built in excess of 46,000 storage tanks in more than 100 countries on all seven continents.

At CB&I, we do big things. As designers and builders of some of the world’s largest energy infrastructure projects, successful execution is critical. Our processes and our people ensure that we continually achieve exceptional standards of quality performance, and that performance excellence has led to satisfied clients and repeat business.

We understand, manage and mitigate our risks. Our ability to execute projects across multiple offices reduces costs, increases the number of available engineers and designers, provides flexibility, and leverages our diverse talent effectively and efficiently. Our project control systems are essential to executing complex EPC projects with predictable cost, schedule and quality performance.

Our talented people who adhere to these systems are the foundation on which we build, and they routinely exceed expectations for each other and our clients. We invest heavily in our employees through training programs for safety, project management, engineering, construction skills and many other disciplines. They have the technical expertise and the tools from CB&I’s comprehensive management system to drive our projects from concept to completion.
