

CB\&I pioneered the concept of field-welding spheres in the 1920s and built the world's first field-erected in the 1920s and built the world's first field-erected Hortonsphere vessel in 1923. Since then, we have
designed and built thousands of spheres around the designed and built thousands of spheres around the orld, including liquid spheres up to 94 feet ( 28.6 m ) in diameter and gas spheres up to 110 feet 33.5 m ) in diameter. We built the world's largest self-supporting sphere, measuring 225 feet ( 69 m ) in diameter nuclear plant containment vessel in New York

Ensuring the health and safety of our employees customers and the community is a core value of CB\&I. We uphold this value in the same way it ensures the uality of our work-implementing rigorous controls hrough every phase of our projects. CB\& is firmly committed to operating all of its facilities and projects in a safe, efficient manner and in compliance with applicable safety, health, and environmental laws, rules, and regulations. Many customers seek our input early in project development, enabling us to deliver long-term value with project-specific solutions. We ensure quality hroughout the project, from our engineering design to he materials we select and by our expertise in welding and non-destructive testing of weld joints, including $x$-ray ultrasonic and others, as necessary

Our vast experience has given us a strong technical base and a foundation for continuous improvement of spheres and their related systems. Our civil, structural and mechanical engineers, together with our project managers and craftspeople, strive to optimize ever sphere to a complete turnkey terminal, We have the ability o work with customers to solve their complex and challenging project needs

## Ambient \& Low Temperature Liquid Storage

The most common use for the Hortonsphere vesse is ambient temperature liquid storage This method uses high stress advantages of the spherical shape to minimize wall thickness. Products stored in ambient and low temperature Hortonsphere vessels include

- Gasoline
- Anhydrous ammonia

Vinyl Chloride Monomer

- Naphtha

Propan

Propylen
Ethane

- Butane

Natural Gas Liquids Butadiene

Many of these products can also be stored at low emperatures by lowering the design pressure. A balance can be found between ambient temperature storage efrigerated storage at atmospheric pressure The vesse ler pessure is low by 150 to 200 psig ( 10.3 to 38 barg) translating into bower cost vessels and larger torage capacities Partially refrigerated Hortonsphere essels are singe-wall vessels with an external insulation system

## Cryogenic Temperature Liquid Storage

Hortonsphere vessels for cryogenic storage are fully efrigerated double-wall spheres with an evacuated, erlite-filled annular space. Cryogenic product storage俍 Hortonsphere vessels include:
LNG

- Hydrogen
Methane
- Oxygen

## Gas Storage

Hortonsphere pressure vessels are commonly used by municipalities to store natural or manufactured gas and sewage treatment plants for digester gas. They are as and aerospace ndustries to store gases such as

| - Hydrogen | - Helium |
| :--- | :--- |
| - Nitrogen | Argon |
| - Oxygen |  |

- Hydrogen
- Argon

Nitrogen
Oxygen
-
Oxy

## Turnkey Terminal Projects

In addition to the spheres themselves, we furnish turnkey terminal facilities. Over the years, we have provided engineering, procurement and construction services for hundreds of marine, pipeline, rail and highway terminals. We can design and build the entire terminal facility, including infrastructure.

## Other Uses

Space chambers
Hyperbaric chambers

- Environmental chambers

Vacuum vessels
Process vessels

- Test vessels

Containment vessels
Surge vessels
Optional Features
In addition to the standard features of a sphere, we can provide optional features such as:

- Water deluge systems

Water deluge systems
Firewater spray systems
Foundations

- Insulation

Pressure relief and vacuum relief valves

## Surface and Volume of Spheres

| Diameter | Surface of Sphere(sq.ft.) | Volume of Sphere |  |  | $\begin{aligned} & \text { Diameter } \\ & \text { in Feet } \end{aligned}$ | $\begin{gathered} \text { Surface of } \\ \text { Sphere(sq.ft.) } \end{gathered}$ | Volume of Sphere |  |  |

Notes: If diameters are assumed as meters, values in columns "Surface of Sphere in Square Feet" and "Volume of Sphere in Cubic Feet" will represent Surface of Sphere in Square Meters and Volume of Sphere in Cubic Meters respectively. Surface Area of sphere = $=3.141593 \mathrm{D}^{2}$ represent Surface of Sphere in Square Meters and Volume of Sphere in Cubic Meters respectively. Surface Area of sphere $=3.141593 D^{2}$
Square Feet. Volume of sphere $=0.523599 D^{3}$ cubic Feeet., $=0.093257 D^{3}$ Barrels of 42 U.S. Gallons. Numbers of barrels of 42 U.S. Gallon at any inch in a true sphere $=(3 d-2 h) h^{2} x .0000539681$ where $d$ is diameter of sphere and $h$ is depth of liquid in inches.

CB\&l is the world's leading designer and builder of storage facilities, tanks and terminals. With more than 59,000 structures completed throughout our 130-year history, CB\&I has the global expertise and strategically located operations to provide our customers world-class storage solutions for even the most complex energy infrastructure projects.
